

120 Clip for Communication Fiber Optic Cable

AI Overview

A 120 clip for fiber optic cables is a cable management accessory designed to securely hold multiple fiber optic cables, ensuring organized routing and protection from stress or damage.

Overview A 120 clip is typically used in telecommunication cabinets, data centers, and industrial installations to manage fiber optic cables efficiently. These clips are designed to prevent unwanted movement, tangling, or stress on the fibers, which is critical for maintaining signal integrity and minimizing attenuation. They are compatible with various cable diameters and can hold multiple fibers in separate slots.

Capacity and Design

Fiber Capacity: Many fiber optic clips are designed to hold up to 16 cables in multiple slots, with configurations such as 4, 6, and 6 components per clip.

Slot Sizes: Clips can accommodate cables of different diameters, including 2 mm, 3 mm, 4.5 mm, 5.5 mm, and 6 mm, depending on the clip model.

Material and Construction: Clips are made from durable materials like spring steel or high-quality plastic to provide strain relief and long-term stability.

Mounting Options: Installation can be done via clip-on, adhesive, or screw mounting, allowing flexibility depending on the application site.

Applications

Telecommunication Cabinets: Organizes fiber cables and prevents interference or damage.

Data Centers: Ensures neat routing of multiple fiber strands, improving airflow and maintenance access.

Industrial Environments: Protects fibers from mechanical stress and environmental hazards.

Additional Features Some clips include flexible wings to grip components up to 1.6 mm in diameter, providing a secure fit for smaller fibers. Low-profile designs help save space in dense installations. Clips can be used in combination with splice protectors, WDMs, or other fiber components for comprehensive cable management.

Summary The 120 clip is an essential accessory...
