

Construction of the Bahrain Energy Internet

AI Overview

The Bahrain Energy Internet is being developed as a converged energy and digital platform, integrating reliable power delivery with advanced digital infrastructure to support industrial resilience and sustainable growth. Overview of the Bahrain Energy Internet The Bahrain Energy Internet, also referred to as the Bahrain Energy Gateway, is not a single facility but a cohesive, scalable system designed to deliver firm power while enabling digital infrastructure and long-term industrial resilience . It is conceived as a converged platform, where energy delivery and digital enablement are planned together from first principles, ensuring reliability, operational control, and scalability over decades . This approach reduces complexity, accelerates project delivery, and allows the system to expand without compromising performance. Key Infrastructure Projects Transmission Network Expansion The Electricity and Water Authority (EWA) is constructing nine new 66 kV substations across Bahrain to strengthen the transmission network and meet rising electricity demand . These substations, along with associated feeders and communication cabling, will add approximately 420 MVA of firm capacity, supporting domestic, commercial, housing, and industrial sectors. The rollout is phased, with two substations commissioned in 2026, four in 2027, and three in 2028 . Digital Infrastructure Integration Bahrain's digital backbone is being enhanced through projects led by stc, including the 2Africa Pearl submarine cable system and a Data Center Park . The submarine cable spans 45,000 km, connecting Bahrain to the Arabian Gulf, India, Africa, and Europe, with a capacity of 180 terabits per second, while the Data Center Park provides high-performance computing infrastructure for global enterprises. These initiatives ensure that the energy network is tightly integrated with digital services, supporting smart...
