

Drawer-type electrical distribution box special offer price

AI Overview

Drawer-type electrical distribution boxes typically range from a few hundred to several thousand dollars depending on capacity, voltage, and features. Drawer-type distribution boxes, also known as GCK or low-voltage switchgear, are modular cabinets designed for AC three-phase five-wire systems with rated voltages of 400V, 660V, or 800V and currents up to 6300A . They are widely used in power plants, substations, industrial facilities, hotels, airports, and new energy projects for power distribution, control, and energy management .

Factors Affecting Price

- Capacity and Voltage Rating:** Higher rated current and voltage systems cost more due to larger busbars, stronger insulation, and enhanced safety features .
- Number of Drawers and Circuits:** More drawers or circuit modules increase the price because of additional components and modularity .
- Material and Construction:** Cabinets made from high-strength steel or flame-retardant plastics, with ventilation and separation between chambers, are more expensive .
- Features and Accessories:** Options like capacitor compensation, surge protection, advanced monitoring, and integration with building management systems can significantly increase cost .
- Application Type:** Industrial-grade units for heavy-duty use are pricier than residential or small commercial units .
- Customization:** OEM/ODM customization, including specific layouts or functional units, adds to the price .

Price Range

- Small residential or light commercial drawer-type boxes:** Typically \$300–\$1,000 depending on circuits and amperage .
- Medium industrial units:** Usually \$1,000–\$5,000, offering higher current capacity and modularity .
- Large industrial or substation-grade units:** Can exceed \$10,000, especially for high-current, multi-drawer configurations with advanced monitoring and safety features .

Additional Considerations Installation, maintenance, and compli...
